

October, 2010

To whom it may concern,

We recently used SELA Group's services to migrate from HP/Mercury QC to Microsoft's TFS 2010.

Using their proprietary tool, Scrat, the service that SELA provided was effective and fast, with full migration taking a couple of days. Thousands of Items were transferred, including Test Cases, Defects and relations between items from several QC Projects. This migration could not have been accomplished in any reasonable or practical timeframe without such a tool, and to the best of our knowledge, no other entity can offer the same service.

The process was conducted by Shai Raiten and Guy Rozen from SELA Group, who provided an effective solution, to our satisfaction.

Best Regards,

Barry Ben-Ezra,

VP R&D,

Advanced Vision Technology
